

# GEN BUS 760

## Homework 4 — *Fall 2021*

**The following reading assignment is worth 30 points.**

1. Pick any two chapters from chapter 4 to chapter 15 in “The Data Warehouse Toolkit” by Kimball (available as an e-book in the UW-Madison library [here](#)). Each of these chapters is a data warehouse design case study.
2. Read each of the two chapters. If there is terminology you do not understand, refer to chapter 1.
3. For each of the two chapters, write down the database schema for the tables in that chapter. A schema is simply a list of table names and their column names. Primary key columns are underlined and foreign key columns have an @ sign as a suffix.
4. Submit a PDF to Canvas with the two database schemas you wrote down above.
